

LEATHER STORAGE

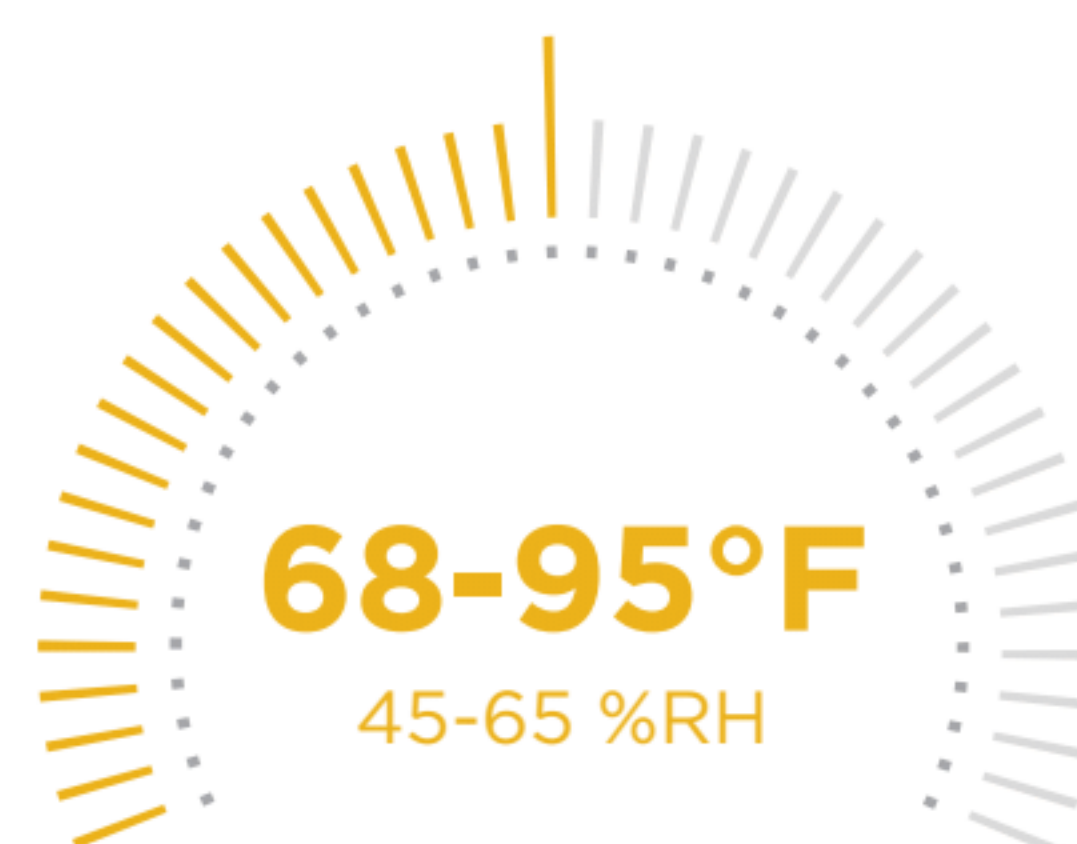

Remove from packaging within 24 hours.

It is our recommendation that leather hides should be removed from the packaging within 24 hours and placed on a horse or stored flat if possible.

Place on a horse or store flat.

During shipment, hides can move or become slightly unrolled which can cause creasing or damage to the hides. Placing the hides on a horse or on a flat surface will allow the leather to properly rest.

Store in a temperature controlled environment.

All hides should be stored in a temperature controlled environment because heat and humidity can affect finished leather. The ideal environment to store leather is between 68-95°F and 45-65% RH (relative humidity). Leather is breathable by nature and will adapt to the environment where it is stored.
